in the open market due to increase in the tempo of construction activity particularly in the important urban centres and also the anxiety of the people to complete the works before the on-set of the Monsoon, which could have resulted in a temporary spurt in prices of non-levy cement in the open market.

The prices of non-levy cement have started showing downward trend in August, 1985. The position regarding availability of cement is also now reported to have improved:

(c) There is no statutory control an the prices of non-levy cement.

However, Government's anxiety over the rise in prices of non-levy cement has been conveyed to the Cement Industry. The Cement Industry has also been advised to hold periodic review of the prices of non-levy cement in the open market so that the cement is rushed to places where prices rise in a disconcerting manner.
